

EWE: Power Perfect Box

Ewe's Power Perfect Box Energy Management System comes in three sizes and is its flagship product for filtering and conditioning your power to provide clean energy to home or business. Wired-In at the electrical distribution panel, it provides robust surge protection, voltage regulation, line conditioning, EMF reduction, harmonics filtration, energy savings through reduced energy consumption and equipment longevity due to cleaner, more efficient power.

Every EWE Power Perfect box filter is manufactured in the USA with meticulous build quality, guaranteed performance and warranty.

Features & Benefits

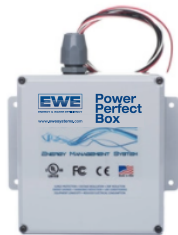

Voltage Regulation & Surge Protection

Feature: Voltage Regulation

1) Voltage regulation corrects the dips and trims the peaks, providing robust surge protection for the entire electrical system.

Benefit: Protection

- 1)** Every outlet in the home is now protected by robust surge protection. (Surge protection you couldn't reach before, like dishwashers, etc.)
- 2)** Nano-surges degrade home video picture quality – now picture-perfect. (Clear TV or computer picture while the vacuum is running.)
- 3)** Nano-surges degrade home audio sound quality – now pitch-perfect. (Clear audio sound when the fridge kicks on.)

Real-time A/C Phase Correction (PFC)

Feature: Phase Correction

- 1) Improved phase quality can reduce amps. Reduced amps often mean less heat and line loss, increasing efficiency and life for electric devices.
- 2) Wasted return path power is recaptured, filtered and reintroduced for potential increased savings.

Benefit: Efficiency & Savings

- 1) Less inductance & improved power factor will consistently increase efficiency.
- 2) Reduced electrical consumption means fewer amps being converted into heat and wasted in I²R losses. (As a result, equipment runs more efficiently, operates cooler & lasts longer.)

Negative Harmonics & Electrical Noise Reduction

Feature: Negative Harmonics Reduction

Advanced negative harmonics filtration and recapturing system is wired for total system health.

Benefit: Clarity

Harmonics create heat in DC devices while degrading video and audio quality in computers and entertainment systems. Solar inverters, DC devices, LEDs and switch-mode power supplies are notorious for adding distortion, now filtered picture perfect.

Electromagnetic Field Reduction

Feature: Electro-Magnetic Field Reduction

Less inductance and improved power quality will consistently increase efficiency. Much has been written on the harmful effects of EMFs and 3rd party data has shown static products to drastically reduce EMF & EMF(R) radiation by as much as 98%.

Benefit: Health

Much has been written on the harmful effects of EMFs and 3rd party data has shown our products to drastically reduce EMF and radiation.
